geoLOGIC Systems and Volant Solutions announce the integration of gDC and ENVOY™ for data transfer

Enable gDC users to efficiently move data directly into their geoscience applications, including PETRA and OpenWorks.

(USA, Houston, TX: October 24, 2011) Volant Solutions (www.volantsolutions.com) and geoLOGIC Systems (www.geologic.com) have announced a strategic partnership to deliver integrated data management solutions for the Upstream Energy industry. This partnership has quickly resulted in the development of a solution to provide geoLOGIC users with the ability to transfer data from geoLOGIC's gDC data repository directly into PETRA and OpenWorks projects using Volant's newly-released ENVOY™ integration solution. The announcement was made at the [PPDM Annual Group Meeting](#) in Calgary, Alberta.

"This agreement with geoLOGIC will enable Volant to provide their customers with an additional capability of transferring data from geoLOGICs' gDC data repository directly into G&G applications, including PETRA and OpenWorks", said Scott Schneider, President and CEO of Volant. "The ability for users to transfer geoscience data from the gDC directly into their interpretation applications, on a one-time transfer basis or on a recurring basis to ensure they have current data from the gDC, will provide a significant productivity improvement for evaluating prospects."

In addition to the initial release to support PETRA and OpenWorks, geoLOGIC and Volant are planning future releases to add support for Geographix, Petrel, Paradigm, PPDM and GeoFrame.

"The agreement with Volant Solutions is consistent with our strategy of working closely with significant industry partners to provide our customers with unrivalled access to our class-leading gDC data," said David Hood, geoLOGIC President. "The integration between the gDC and the Volant Solutions' integration technology will further improve the productivity of our users".

About Volant Solutions

Volant Solutions (www.volantsolutions.com) is an independent software vendor with significant experience developing and delivering software solutions that automate and integrate technical data, applications and workflow processes. Volant's EnerConnect™ and ENVOY product lines are the solution of choice of numerous industry leading Upstream Oil & Gas companies to integrate their key geoscience databases and applications.

About geoLOGIC systems ltd.™

Headquartered in Calgary, geoLOGIC systems ltd. (www.geologic.com) has been creating and supplying data and integrated software solutions to the energy and production industry since 1983. The company's market-leading decision support tool, geoSCOUT, is a fully-integrated, Windows-based exploration system that supports oil and gas professionals in their search for hydrocarbons by combining presentation-quality mapping and cross-section tools with data handling and analysis software. geoLOGIC also offers a range of data and data management solutions, including a robust data center (the gDC) which houses value-added government well and land data in an open Public Petroleum Data Model, as well as a proprietary data engine for all of your company's data management needs.
